

Revano Satria

ST. M. Arch
Semarang, Indonesia

About

Revano has been recognized for his entrepreneurial achievements; he has founded numerous independent and highly successful firms, providing services for all stages of the design process.

Revano holds a **Master of Architecture** in the field of **Emergent Technologies and Design at the Architectural Association (AA) in London**, where his pioneering research throughout his post-graduate studies allowed him to serve as a consultant for **Buro Happold in London** on the **Cairo Expo City project in Egypt (designed by Zaha Hadid Architects)**.

Revano's highly distinguished career has been cemented with an extensive number of **national and international awards**, three of which; **The Best of The Best, The Excellent Design and Favourite Design, - awarded by the Indonesian Architectural Association** - were presented to him during his time in academia. However, his most prized possession was for his achievement in winning **1st place in his first International Competition for the development of Bangka Waterfront City in Indonesia**.

More importantly however, **Revano ensures that he gives back to the architectural community**, holding countless conferences and seminars lecturing to students and professionals alike on the progressive practices of architectural design and how their application is meant to serve all aspects of human life, ensuring his research serves more than just the end user.

His interior design company **revastudio** was selected in the **Indonesia's Top 50 Interior Designer book published by IMAJI**. In 2011 the company also received the **MURI World Records for designing 250 interior projects within 10 working hours**. In 2011 Revano was chosen among **Indonesia's top 30 Architects** to represent his country in **IA 2011 World Congress of Architecture in Tokyo**. He was the youngest architect from all the delegations.
